

OFFECCT

Care instructions

Thank you for choosing **OFFECCT**

We trust you will be happy with your new seating furniture from OFFECCT. It is designed for your lifestyle and has been made from the very best materials. Our furniture is intended to be used, to be enjoyed and to be with you for a long time to come. If you would like to know more about OFFECCT, please visit our website at www.offecct.se

On delivery

We deliver your sofa/easy chair well wrapped. The legs are packed separately to prevent damage – look out for a transparent package with black text. Sofas are loaded standing on one end, and loose seating cushions may change shape during transport. To restore them to their ideal shape, simply plump them up before use.

Attaching legs and castor wheels

Our sofas and easy chairs have pre-drilled holes in the base for leg attachment. Insert the leg screw into the hole and tighten. Extra reinforcement screws are supplied with some models. Never tighten a screw-in leg with excessive force as this can damage the attachment nut. Please note that some models have different legs for the back and front. The longer legs should always be fitted at the front.

Attaching a plinth or sofa underframe

Some of our models come with a plinth or sofa underframe rather than separate legs. Screw into the pre-drilled holes or visible metal fittings using the screws supplied.

Sunlight

Remember to protect your new sofa or easy chair from strong sunlight. UV radiation is never good for cushion furniture – it fades the fabric and weakens the seams, thereby reducing its life span.

Washing & cleaning

Fixed covers

Try removing any stains from your sofa/easy chair using a warm, damp cloth. Avoid excessive rubbing. If marks remain, please contact your dealer for further advice. Never use strong detergents.

Removable covers

Please contact your distributor to receive advice on how to best clean your furniture covers.

Leather

The leather we use for our cushion furniture is tanned from the finest Scandinavian cattle hides. The leather needs regular care to retain its original finish. Dust once a week as dust and dirt act as an abrasive on leather. A leather cleaner can also be used to remove stains, as it will not dry out the leather. You should also treat the leather two to three times a year, or after using a leather cleaner. Leather cleaners may be purchased from your dealer. Never use strong detergents.

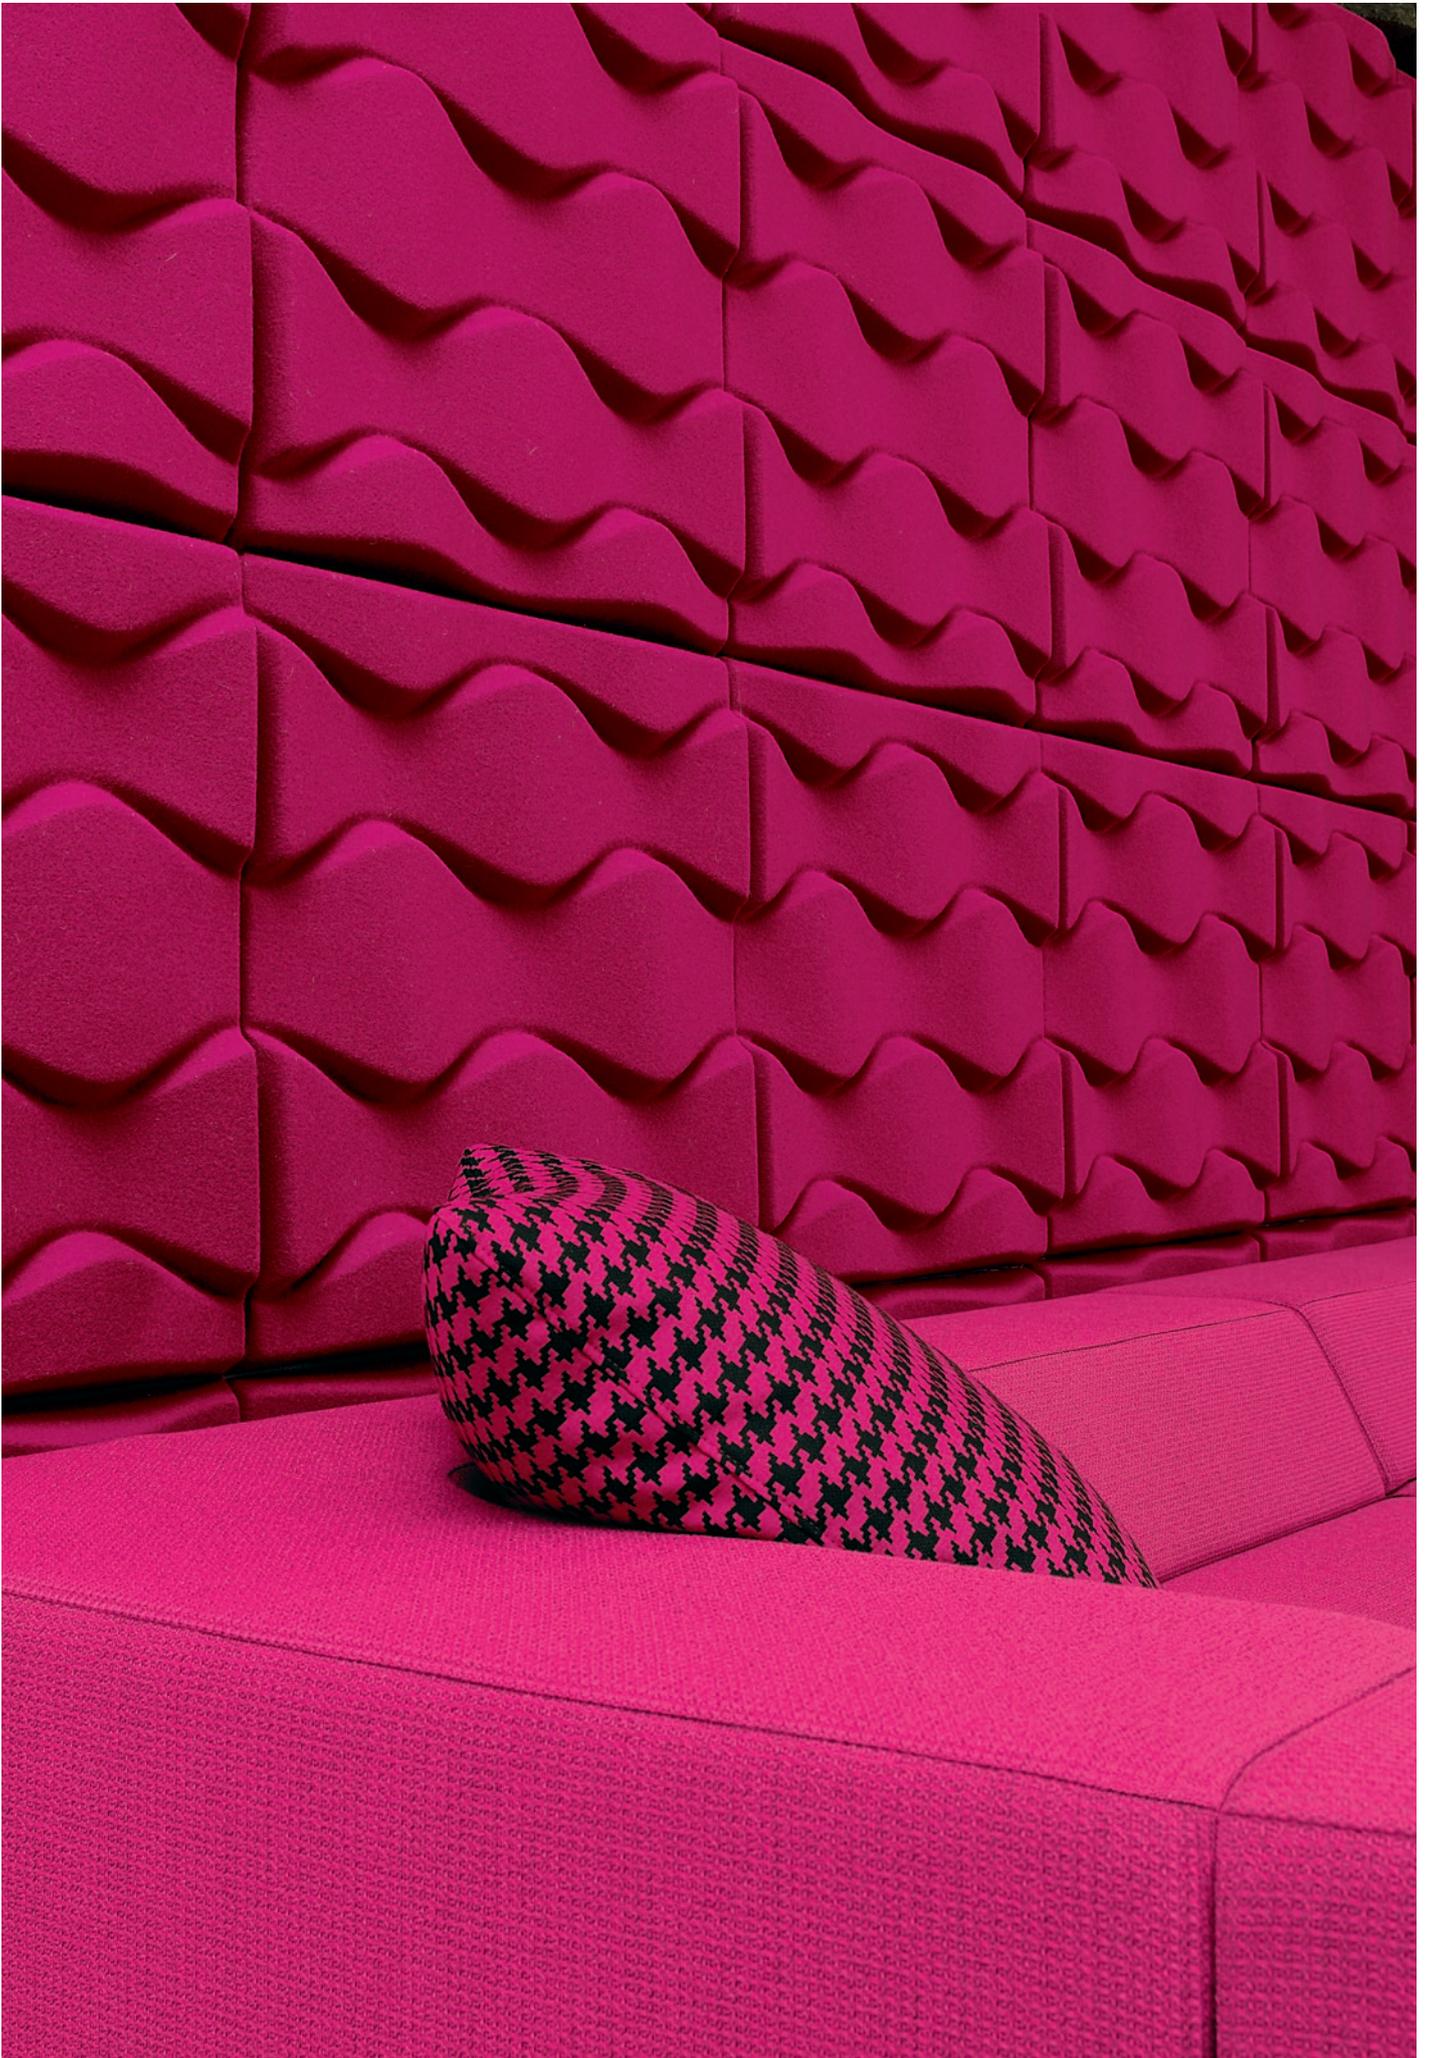

In the event of spillage

If you spill liquid on a seating cushion, immediately remove the fabric cover. Wash the outer cover according to the instructions. The inner cushion cover should also be unzipped if wet. Take out the core if removable, and leave to air-dry fully before reassembling the cushion. This is important to retain the shape and quality of your sofa/easy chair. Avoid wetting or rubbing the inner cushion: the weave in the fabric is specially treated to hold the cushion in place and may be damaged. For more information, contact your local distributor.

Scatter cushions

Shake the scatter cushions regularly to retain their shape. The fabric covers may be drycleaned according to the instructions. The inner cushion, however, is made of down and is not washable. In the event of spillage, the inner cushion should be air-dried (see 'In the event of spillage' above).

Retaining the shape

Down for comfort and long life

Much of OFFECCT's seating furniture has down and cut cold foam in the seating and scatter cushions. Combined with a cold foam core, the stuffing offers the highest comfort and unique care and cleaning opportunities. With a little care, down will retain its shape better than any other material. Plump up your cushions regularly to ensure they keep their shape and your furniture stays soft and comfortable.

Seating and back cushions

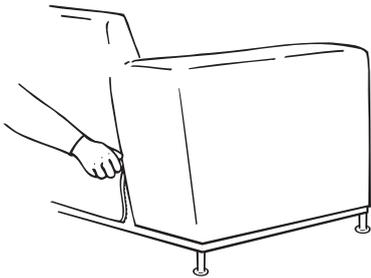

Most of the seating/back cushions have a zip at the back or bottom. The inner cushion may be removed and aired, and the fabric cover may be cleaned according to the instructions. Avoid direct vacuum cleaning of the inner cushion, as this can easily pull out feather quills and ruin the cushion. To remove dust, beat the cushion instead and the down will retain its volume. The inner cushion and filling are not washable. For more information, contact your local distributor.

Seating furniture with removable covers

How to remove the covers

The removable covers on your sofa/easy chair have zips at the back and Velcro fasteners. Begin by unfastening the zips at each corner of the back. Then remove the cover by carefully lifting the bottom edge of the fabric from the frame.

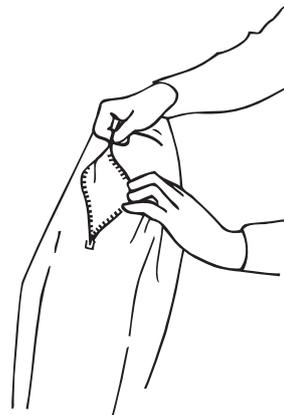

1. Unfasten the zips at each corner of the back of the sofa/easy chair.

2. Undo the Velcro fasteners from the sofa/chair.

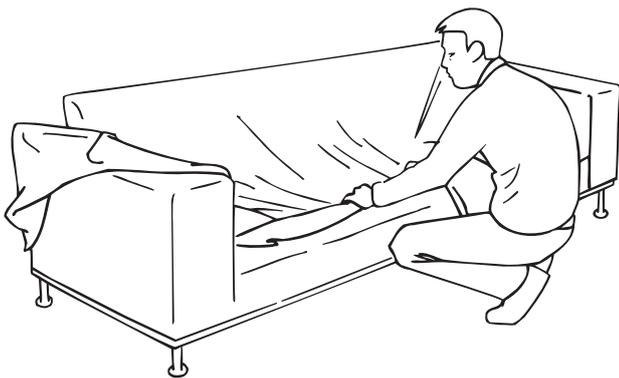

3. When the cover is loose, carefully pull it off. Begin with the armrests.

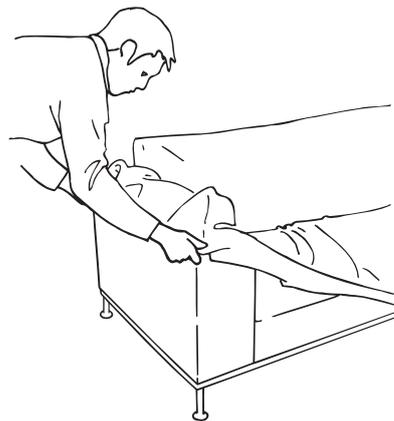

4. Unfasten the zip on each back and seating cushion, and remove the fabric cover. Remove the inner cushion and cold foam core. Air the down and plump up the cushion.

How to replace the covers

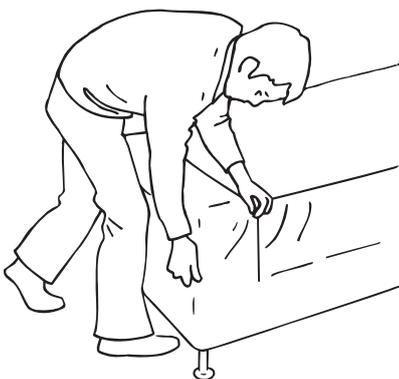

Put the cover back on as follows:

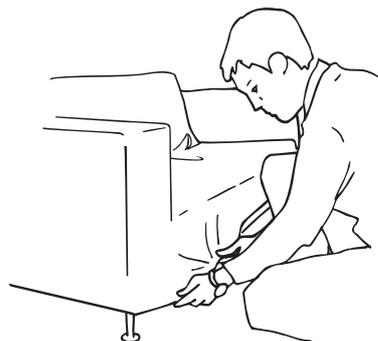

1. Hang the cover on the back of the sofa, so the back section is straight. Pull the cover down and forward over the seat. Fasten the Velcro attachments in the joint between the back and seat.

2. Pull the cover down over the armrests.

3. Walk round the sofa checking that the cover fits correctly at the armrests, back and front. Ensure that all corners fit snugly in the seams.

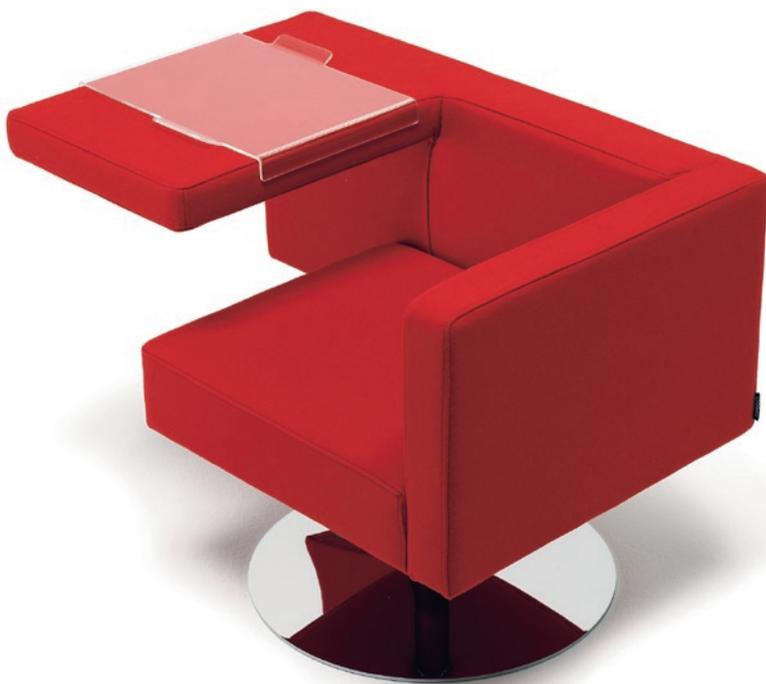

4. Attach the cover at the bottom.

Robust, durable furniture

As a guarantee of quality, much of OFFECCT's furniture is tested at SP, the Swedish National Testing and Research Institute, to SS-EN1728, and is approved by the Danish Technological Institute to European standards (ISO 7173). Many pieces are approved for use in both homes and public environments. The tests involve several stages, including 100,000 sits on the seat and back.

Your dealer can help

If you have any questions or experience problems with your OFFECCT seating furniture, please contact your dealer. If you would like to know more about OFFECCT and our product design, please visit our website at www.offecct.se
